DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 33-57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ninomiya et al., EP 0 930 339 A1 (hereinafter "Ninomiya I") in view of Ninomiya et al., EP 0 892 006 A2 (hereinafter "Ninomiya II"). Ninomiya teaches a resin

Art Unit: 1713

composition comprising a sponified ethylene-vinyl acetate copolymer, a boron compound, acetic acid and acetate salt and phosphoric acid compound. Ninomiya I differs from the present invention in that Ninomiya I does not have the specific conditions for the extrusion processes. Ninomiya II teaches in analogous art processes for preparing EVA under extrusion conditions. See Ninomiya II, page 9 and Examples. In view of Ninomiya II, one having an ordinary skill in the art would be motivated to modify Ninomiya I by using the extrusion conditions. Such modification would be obvious because one would expect that the processes of making EVA as taught by Ninomiya I would be similarly useful and applicable to extrusion conditions as taught in Ninomiya II.

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert D. Harlan whose telephone number is (571) 272-1102. The examiner can normally be reached on Mon-Fri, 10 AM - 8 PM.

5. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David W. Wu can be reached on (571) 273-1114. The fax phone numbers for the
